Django

Django is a python based web framework used for building web applications of high-quality
It helps us to avoid repetitive task, which process of web development an easy experience and save times.

Note: Django is designed 100% for python

How to create a Virtual Environment in Windows

We can use "venv" command to create a virtual environment
Steps to create a Django Project

01.Create a Folder
02.Enter into a Folder
03.Open cmd from current folder
04.Check the Django Version --> python -m django –version
05.Create Virtual Environment --> python -m venv env
Note: Make sure to "active" the virtual environment before you start working on a project
06.Enter into Scripts Folder -->activate
07.pip install django
08.create the project --> django-admin startproject projectName
09.Change the Folder --> cd projectName
10.Type Command --> dir
